RHO CHI BETA DELTA CHAPTER

2014
THE RHO CHI SOCIETY

The Rho Chi Society encourages and recognizes excellence in intellectual achievement and advocates critical inquiry in all aspects of Pharmacy.

The Society further encourages high standards of conduct and character and fosters fellowship among its members.

The Society seeks universal recognition of its members as lifelong intellectual leaders in Pharmacy, and as a community of scholars, to instill the desire to pursue intellectual excellence and critical inquiry to advance the profession.

Remember, Rho Chi Honor Society membership is NOT a requirement for submitting articles to the Rho Chi Post!
RHO CHI POST: TEAM MEMBERS

@ Tasnima Nabi  
6th Year, STJ; Editor-in-Chief  
Writing has always been my greatest outlet for experience and knowledge, through which I hope to keep you engaged and informed. It is imperative to keep up with our changing profession and community. I look forward to bringing pertinent information to the newsletter.

@ Katharine Cimmino, PharmD  
Graduate Copy Editor [Content-Focused]  
I have always been an avid reader and writer. As a member of the Rho Chi Post I am able to merge my passions with the professionalism that comes with aspiring to be a healthcare provider. I am eager to be a part of a publication that promotes my interests and vocation.

@ Bharat Kirthivasan, PhD  
Graduate Copy Editor [Content-Focused]  
I received my doctorate in Industrial Pharmacy researching nanoparticles for delivery to the brain. The only thing I enjoy more than reading a well-written piece of work is writing it. I am glad to work for the Rho Chi Post, and I encourage others to do the same.

@ Davida Brown  
5th Year, STJ; Copy Editor [Content-Focused]  
My two great loves are innovative science and quality writing; the Rho Chi Post is an insightful combination of both. As an editor, I look forward to bringing relevant information and fresh perspectives to the student and faculty of St. John’s University, as well as to making the Rho Chi Post a newsletter that offers something new to every reader.

@ Tamara Yunusova  
5th Year, STJ; Copy Editor [Content-Focused]  
I enjoy articulating information in a captivating and insightful way. I hope to make this publication more informative, student-friendly, and innovative.

@ Fatema Elias  
6th Year, STJ; Copy Editor [Content-Focused]  
I am honored to be a part of the Rho Chi Post team. In this age of technology and the continuously changing healthcare profession, I hope to engage like-minded students and professionals. Writing is something that I hold dear to my heart and I hope with this newsletter we can all stay well informed, interested, and educated.

@ Sang Hyo Kim  
4th Year, STJ; Section Editor: Puzzles  
Advancing technology and medicine, as well as prolonging the lifespan and improving quality of life, have increased the geriatric population. Pharmaceutical industries and healthcare systems persistently work to find solutions to changing demands and new problems of the society. I wish to learn, educate, and prepare myself and others for the future.

@ Azia Tariq  
5th Year, STJ; Section Editor: News  
The Rho Chi Post is a prominent and highly esteemed resource for pharmacy students and professionals. I am privileged to be a part of the team and hope to contribute informative and engaging pieces to the newsletter.

@ Svetlana Akbasheva  
6th Year, STJ; Section Editor: Clinical  
I am very excited and honored to be part of the Rho Chi Post! In a profession that is constantly evolving with new developments, it is so important to remain informed and current. The Rho Chi Post helps do just that, and I look forward to contributing to this unique publication.

@ Nicollette Pacheco  
5th Year, STJ; Staff Editor [Graphics-Focused]  
As a new member of the Rho Chi Post team, I have a vast appreciation of what it means to be a future pharmacist in the rapidly evolving world of healthcare. I am looking forward to being on the team as a graphics-focused staff editor, and I hope to bring my passion for science and creativity to the Rho Chi Post.

@ Andrew Leong  
6th Year, STJ; Staff Writer  
Students have to do more than what is required of us in classes to truly learn about our profession. That’s why I joined the Rho Chi Post. This publication represents a channel by which our team members, faculty, and readership can share information – something I believe is important in this ever-changing pharmacy world.

@ Sylva Ohanian  
5th Year, STJ; Staff Writer  
The Rho Chi Post is a refreshing outlook on our profession. I am thrilled and grateful to be able to work with the other members in continuing its success, and hopefully to bring greater attention to it, which it deserves.
RHO CHI POST: TEAM MEMBERS

@ Fawad Piracha
6th Year, STJ; Finance and Outreach Manager
I am delighted to join the editorial team. I have the firm intention of broadening readership and facilitating growth of the Rho Chi Post.

@ Joshua Bliss
6th Year, STJ; Social Media Manager
By providing student-organized, reliable healthcare information, the Rho Chi Post helps us all in fulfilling our education both in and out of the classroom. Education is the tool we use to set paths for our futures, and every chance to expand our education is a chance at building a better future. I am honored to be a part of the Rho Chi Post & look forward to the future!

We are always looking for creative and motivated students to join our team!

QUOTE OF THE MONTH

By: Nicollette Pacheco, Staff Editor [Graphics-focused]

“Continuous effort - not strength or intelligence - is the key to unlocking our potential.”

Winston Churchill
Quitting smoking greatly reduces the risk of many diseases such as lung cancer, coronary heart disease, and stroke, all of which increase morbidity and mortality in patients. Currently in North America, there are three main pharmacological therapies used in the management of smoking cessation. The most recognizable one, nicotine replacement therapy (NRT), can come as a patch, gum, or lozenge. Antidepressants, such as bupropion and nortriptyline, also have some use as smoking cessation therapies. Finally, varenicline is a nicotinic receptor partial agonist and works by binding to the receptor more weakly than nicotine, therefore reducing cravings and withdrawal symptoms.\(^1\)

Cytisine is another nicotinic receptor partial agonist that has been used since the 1960s in Eastern Europe. Four systematic reviews were conducted and they all found that cytisine was superior to placebo for short-term and long-term abstinence. Cytisine was also shown to have no significant increase in adverse effects when compared to placebo although gastrointestinal symptoms were more common.\(^2\)

In a recent parallel-group, open label, randomized, controlled, noninferiority trial, it was hypothesized that 25 days of cytisine (the manufacturer’s recommendation\(^3\)) plus low-intensity behavioral support would be at least as effective as 8 weeks of NRT plus low-intensity behavioral support for smoking cessation.\(^4\) Conducted in New Zealand, it is the first study that has compared these two treatment modalities.

Participants were at least 18 years of age, daily smokers, and motivated to quit. Exclusion criteria were chosen on the basis of varenicline-related concerns such as self-reported pheochromocytoma, a blood pressure above 150/100 mmHg, or pregnancy. Participants were also excluded if they were already taking cessation medication or if they were already in another cessation program or study. The primary endpoint of the study was self-reported continuous abstinence from smoking for one month after quit date. After all criteria were met, 655 participants were chosen for each study arm.\(^4\)

The study found that cytisine was non-inferior to nicotine-replacement therapy: 1 month continuous abstinence rates were significantly higher in the cytisine group than in the NRT group (40% vs. 31%, \(p<0.001\)). Additionally, at each of the point-prevalence abstinence times (1 week, 1 month, 2 month, and 6 month), cytisine was statistically significantly superior to NRT. At 1 week, 41% of the cytisine participants had abstained versus the 30% of the NRT participants (\(p<0.001\)). At 1 month, 42% had abstained versus 33% (\(p<0.001\)). At 2 months, 38% had abstained versus 32% (\(p=0.020\)). At 6 months however, results were not statistically significant (31% vs. 30%, \(p=0.549\)).\(^4\)

Approximately 53% of participants were adherent to the guidelines for cytisine treatment (they had taken at least 80 tablets), whereas 67% in the NRT group were adherent with treatment guidelines (they had used NRT at both 1 week and 1 month). While this could mean any number of things, the most probable reason is the adverse event profile. As expected of a varenicline analogue, 31% of participants in the cytisine group had experienced some type of adverse effect compared to 20% in the NRT group. The most common of these adverse effects were nausea and vomiting (5% vs. < 1%) and sleep disorders (4% vs. < 1%).\(^4\)

Because the study was not completely blinded, there is potential bias. The study authors concluded that “… researchers were aware of treatment allocation, [and] there may have been a reporting bias in favor of cytisine.” Another possible bias was the fact that participants in the cytisine group received a 25-day course of tablets by courier while partici-
New Treatment Option for Diabetic Retinopathy

By: Sylva Ohanian, Staff Writer

The FDA recently approved aflibercept (Eylea®) injection for the treatment of diabetic retinopathy (DR) in patients with diabetic macular edema (DME).1

Diabetic retinopathy is the most common diabetic eye disease and is a leading cause of blindness in American adults. It is generally characterized by changes occurring in the blood vessels of the retina. In some instances of DR, diabetic macular edema ensues, which is when blood vessels swell up and leak fluid, and new blood vessels may grow on the surface of the retina. Vision loss may occur in some patients as a result of DR, especially if left untreated.1,2 Aflibercept works by acting as a soluble decoy receptor that binds vascular endothelial growth factor-A (VEGF-A) and placental growth factor (PLGF), thereby inhibiting effects of vascular permeability and neovascularization.3

The FDA granted aflibercept breakthrough therapy designation for the treatment of DR in patients with DME. Breakthrough therapy designation is assigned if preliminary clinical evidence indicates that a drug displays considerable improvement over current therapies for patients with a serious or life-threatening condition. Once designated, the drug undergoes expedited development and review by the agency. Requests for breakthrough therapy are assessed and approved or rejected within 60 days of receipt.4

Preliminary evidence for aflibercept included two clinical studies where 679 participants were randomly assigned to receive aflibercept injections or

macular laser photocoagulation, a laser-based procedure that burns areas of the retina. Compared to patients who did not receive aflibercept, patients receiving aflibercept at week 100 showed significant improvement in the severity of the disease.¹

The recommended dose for DR with DME is 2 mg (0.05 mL or 50 microliters) administered by intravitreal injection every month for the first five injections, followed by 2 mg (0.05 mL) once every 2 months. The manufacturer notes, “Although Eylea® may be dosed as frequently as 2 mg every 4 weeks (monthly), additional efficacy was not demonstrated when Eylea® was dosed every 4 weeks compared to every 8 weeks.”³

Common side effects associated with the use of this product include conjunctival hemorrhage, eye pain, cataracts, vitreous floaters, vitreous detachment, and increased intraocular pressure.³ Serious side effects include endophthalmitis and retinal detachments.¹

The recent approval of aflibercept for the treatment of DR with DME will allow doctors and patients to make appropriate and informed treatment decisions for diabetic retinopathy.

*Aripiprazole (Abilify®) Approved*

*By: Sang Hyo Kim, Section Editor*

On April 28, 2015, the U.S. Food and Drug Administration approved aripiprazole, the generic of Abilify®.¹ Aripiprazole tablets are used to treat patients with schizophrenia and bipolar disorder.¹ Although Otsuka Pharmaceuticals, the manufacturer of Abilify®, tried to block generic competition by requesting a temporary restraining order on one of three patents beyond the April 20th expiration deadline, the U.S District Court for the District of New Jersey denied the request.² Now, pharmaceutical companies can launch the affordable generic for patients.

Aripiprazole is available as a tablet, oral solution, orally disintegrating tablet, and injection.⁴ The injection comes in prefilled syringes and vials for reconstitution and must be injected via intramuscular route only.⁴ The prescribed dose varies, depending on various factors such as patient age and symptoms. Aripiprazole is usually taken by mouth once a day with or without food; the drug can control the symptoms of schizophrenia and bipolar disorder, but will not cure it.³ There is no dosage adjustment necessary for renal and hepatic impairment, but the drug requires dosage adjustment with concurrent CYP450

The U.S. Food and Drug Administration (FDA) has approved TissuGlu®, the first tissue adhesive approved for internal use. William Maisel, M.D., M.P.H., Deputy Director of Science at FDA’s Center for Devices and Radiological Health states, “The FDA’s approval of the first synthetic adhesive for internal use will help some abdominoplasty patients get back to their daily routine after surgery more quickly than if surgical drains had been inserted.”

The intended use for TissuGlu®, a lysine-derived, urethane-based (LDU) adhesive, is to connect tissue flaps made during surgery in order to remove excess skin and fat. In addition, it is intended to restore weakened or separated abdominal muscles in procedures such as an abdominoplasty surgery. During such procedures, drops of liquid adhesive are applied using a hand-held applicator. After applying the drops, the surgeon positions the abdominoplasty flap in place. Water in the patient’s tissues starts a chemical reaction that bonds the flaps together. The surgeon then proceeds with standard closure of the skin using sutures. Connecting the tissue flaps with an internal adhesive can help reduce or even eliminate the need for postoperative surgical draining of fluid.

Data from a clinical study of 130 participants undergoing elective abdominoplasty suggests that participants who received TissuGlu® without surgical drains were able to return to most daily activities such as showering and climbing stairs, and resume their usual routines sooner than those who had surgical drains. Half of the participants received surgical drains. By: Azia Tariq, Section Editor

drains while the other half received LDU adhesive and no drains. The study results showed that 73% of participants who received the adhesive required no postoperative interventions to drain fluid that had accumulated between the abdominoplasty tissue flaps. Of the 27% of patients who required invasive treatments, 21% received needle aspirations alone and 6% received both needle aspirations and drains for persistent seroma formation. There was no significant difference between the groups in reported levels of pain or discomfort due to surgery.1

Additional studies determined that usage of TissuGlu® lowered both drainage time and volume. In a prospective, multicenter, randomized trial assessing the use of the lysine-derived urethane adhesive in patients undergoing abdominoplasty, 20 patients were randomized to a control or to a treatment group in which the adhesive was applied to the abdominal wall prior to closure of the abdominoplasty. Control patients underwent an identical procedure but without application of TissuGlu®. Results indicated decreased drain removal time (2.9±1.4 vs. 3.7±1.5 days; p=0.13) and lower total drain volume (208.7±138.2 vs. 303.5±240.8 ml; p=0.14) in the treatment group.2

In the Journal of Plastic, Reconstructive, and Aesthetic Surgery, a canine model of abdominoplasty was used to examine seroma formation and efficacy of the LDU adhesive. More fluid accumulation was observed in the control group than the treatment group (mean, 690 vs. 44; median volume, 348.5 vs. 15 ml; p < 0.01) at Week 3 necropsy. The study demonstrated that the adhesive is capable of preventing seroma formation in the canine abdominoplasty model and that its usage may be clinically beneficial in the prevention of seroma formation in patients undergoing abdominoplasty.3

The use of LDU adhesives was also analyzed in mastectomy patients. In the study, 32 patients received a mastectomy using a gold standard mastectomy technique as well as TissuGlu®. A control group of 173 patients who received a gold standard mastectomy only was evaluated retrospectively. Similar results were shown regarding drain removal time (17% decrease) and hematoma formation (14% decrease). Though the primary endpoint results showed no significant difference in the development of a postoperative seroma (p>0.05), it was found that 7% of the control group patients required revision surgeries or re-hospitalization due to infection, whereas none of the LDU adhesive patients required re-hospitalization. Secondary endpoints revealed that superficial postoperative hematoma was present in 17% of the control group vs. 3% in the treatment group (p<0.05). Drain removal times also favored the LDU adhesive group (4.2 vs. 3.5 days, p<0.05).4

Although still early, the decrease in formation of hematoma, which are reflected by decreasing rates of re-hospitalization and revision surgeries, render LDU adhesive a promising agent in abdominoplasty and reconstructive surgery.

ALL ARE WELCOME
MISSION

The Rho Chi Post is an award-winning, monthly, electronic, student-operated, faculty-approved publication that aims to promote the pharmacy profession through creativity and effective communication. Our publication is a profound platform for integrating ideas, opinions, and innovations from students, faculty, and administrators.

VISION

The Rho Chi Post aims to become the most exciting and creative student-operated newsletter within St. John’s University College of Pharmacy and Health Sciences.

Our newsletter continues to be known for its relatable and useful content.

Our editorial team continues to be known for its excellence and professionalism.

The Rho Chi Post essentially sets the stage for the future of student-operated publications in pharmacy.

VALUES

Opportunity
